

Abstract

#####.

Center-aligned, bold, uppercase/
lowercase, Times New Roman: 18

NOTES:

1. Do the same with all chapter titles.
2. The title starts in the fifth line from the top of the page.

Chapter One

Introduction

1.1 Background of the Study

This section of the chapter sets the scene and provides the reader with background information regarding the related variables, as well as an outline of the purpose of the research. The author briefly refers to the theoretical/background framework within which the study is developed.

1.2 Statement of the Problem

#####.

1.3 Purpose of the Study

#####.

1.4 Research Question(s) and Hypothesis(es)

#####.

1.5 Significance of the Study

#####.

1.6 Definition of the Key Terms

#####:

1.6.1 First key term. ###

#####.

1.6.2 Second key term.

#####.

1.7 Limitations and Delimitations

#####.

Chapter Two

Review of the Related Literature

2.1 Overview

This chapter starts with a paragraph stating the overview of the chapter. The components of literature reviews can be arranged in various ways. As the first choice, the chapter continues with two sections.

The initial section deals with the major theoretical issues related to the variables involved in the study with the priority of independent over dependent variable(s).

The second section provides a detailed explanation on the related studies.

As the second choice, the chapter continues with grouping research studies based on similarities in the concepts or theories of interest, methodological similarities among the studies reviewed, or the historical development of the field.

The numbering of the titles in this chapter follows the same regulation (e.g., 2.1) and varies depending on the quantity of contents you present.

Having reviewed the theoretical/empirical aspects of the topic, this chapter ends with the statement of the theoretical and/or empirical gap which can be bridged by the results of the present study.

Chapter Three

Method

3.1 Overview

This chapter provides / The purpose of the present chapter is / This chapter aims to #####

#####.

3.2 Participants

#.

3.3 Instruments

#####.

3.4 Design

##.

3.5 Procedure

How the study was conducted is explained within the procedure section. In this part, the author/researcher provides a complete description of the methods used and what the participants did during the research investigation. The author should describe a step-by-step process of conducting the research through mentioning the instruments used in pilot and main study. In case the variables

are not operationally defined in the definition of the key terms section, the researcher is recommended to include them in this section. Procedure is required to be written so succinctly that a reader will be able to replicate the study.

3.6 Data Analysis

#####.

Chapter Four

Results and Discussion

4.1 Overview

This chapter provides / The purpose of the present chapter is / This chapter aims to #####

#####.

4.2 Pilot Study (If applicable)

#####.

4.3 Main Study

#####.

4.3.1 Research hypothesis one. #####
#####.

4.3.2 Research hypothesis two. #####
#####.

This part reports the statistical data analysis including both descriptive and inferential statistics to test the research hypotheses.

4.4 Discussion

Open the discussion section with a clear statement of the support or nonsupport for your original hypotheses, distinguished by primary and secondary hypotheses. If hypotheses were not supported, offer post hoc explanations. Similarities and

differences between your results and the work of others should be used to contextualize, confirm, and clarify your conclusions. **Note:** Do not simply reformulate and repeat points already made; each new statement should contribute to your interpretation and to the reader's understanding of the problem.

Chapter Five
Conclusions and Implications

5.5 Suggestions for Further Research

#####.
